## **Quality with Tradition**

Founded by Edmund Bühler in the university city of Tübingen in 1880, Edmund Bühler GmbH is still owned by the family today.

More than 125 years later, Edmund Bühler GmbH has developed to become a company which operates throughout the world. The production and sales of conventional laboratory devices is traditionally a main focus of the company. A second focal point is the development and production of research equipment, in particular for the quickly growing field of materials science.

In the laboratories of the world, the "Bühler Shaker" is considered to be a synonym for the efficiency of the company. Competence, experience and the commitment to excellence in quality, which is steadily anchored in the company philosophy, form the basis for a unique program of technically mature products. The number of variations offered here makes the implementation of various application requirements possible.

Customized solutions, the specifications of which have been exactly developed for individual scenarios, round off the range of products on offer. Experienced and qualified employees and the high vertical range of manufacturing at the location in Hechingen provide the basis for our flexibility.

As a partner of our customers, we gladly accept the responsibility of always making the optimal solutions available. Do not expect less.
