

The professional aid to manual pipetting.

A punctiform illuminated working surface helps to keep the target position of the pipette in sight at all times. The advantages are plain to see:

- Improved level of quality through avoidance of errors
- Swifter working times
- More efficient results in the laboratory
- Range of adaptors means that one single unit is suitable for use with all microtitration plates (96/384-well)

A one-off investment that pays for itself in practically no time at all and an aid that you and your employees will never want to be without.

**Improve the quality
of your laboratory.**

ManuPEP®
